

# Reason 12.7 Release Notes

- **Features**
  - Reason Companion has replaced Authorizer for Rack Extension management. This applies to all Reason 12 users going forward. Rest in peace, Authorizer, you magnificent bastard!
- **New Remote maps for Korg nanoKey Studio and nanoKontrol Studio**
- **Remote maps have been updated for Mackie Control, Extender, and Combo**
- **Bug Fixes**
  - Fixed a bug where an Access Denied alert could appear in Reason Rack Plugin (AU) in Logic when updating Rack Extension licenses on Apple silicon
  - Fixed a bug where the Rack Navigator sometimes would show black boxes instead of devices (those were not really cool and edgy Dark Mode devices, sorry!)
  - Fixed a bug where Korg Triton VST3 could hang on Windows
  - Fixed a bug where VST3 plugins didn't terminate correctly when deleting the last instance
  - Fixed a bug in the Combinator where the Target label remains after setting it to "No Target"
  - Improved error handling for macOS audio drivers
